Phase
- Select all
- Launch hype
- Early league
- Mid league
- Late league

Pick a league phase in the slicer to see how the market changes. Median Price is the typical item price in chaos orbs. Currency Index shows how the purchasing power of Chaos Orb compares with the start of the league (1.0). Price Volatility is how much the currency index jumps from day to day (in %). Top 1% Share is the share of total market value held by the most expensive 1% of items.

Which categories and items drive the market?

Median Price by Category

Pick a league and a league day. Median Price by category shows which item categories are the most expensive. Top movers lists the 10 items whose price rose the most since the previous day. Top 1% Share is the share of total market value held by the most expensive 1% of items. Right-click an item in Top movers and choose Drill through → Item detail to see its price history in every league where it was among the top items.

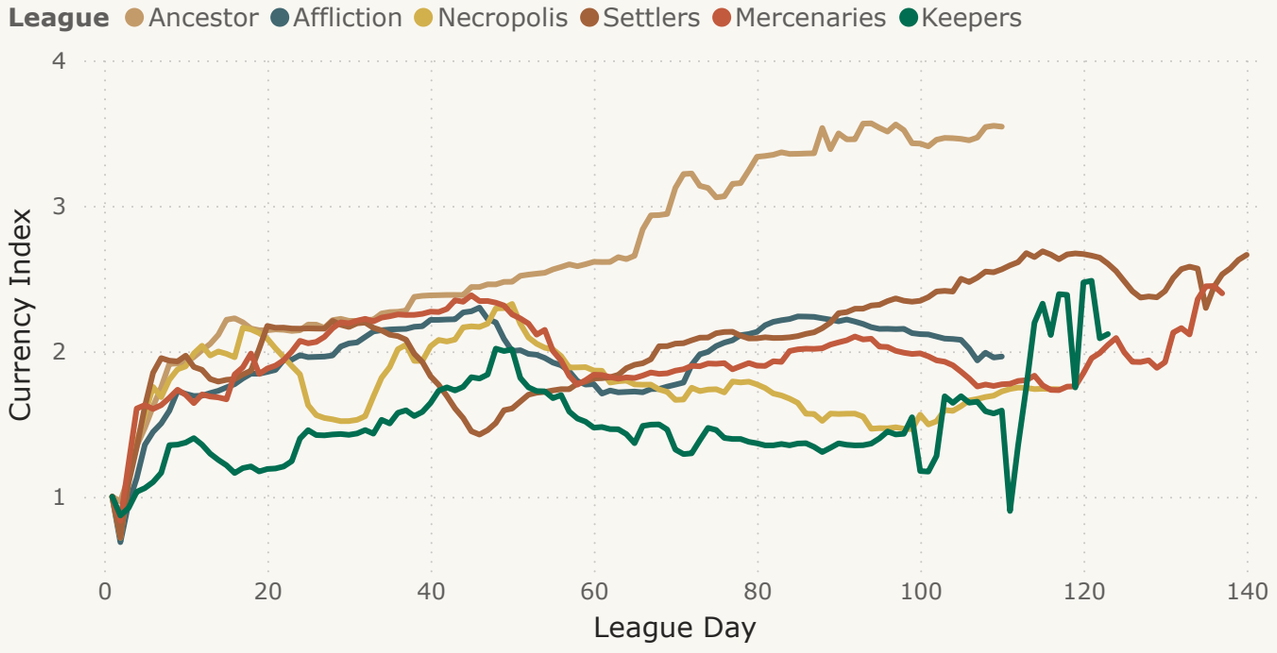

Do all 6 leagues behave the same?

League Overview | Market Structure | League Comparison

League	Median Price	Price Volatility	Top 1% Share	Avg Players	Market Value per Player	League Cluster
Keepers	3,80	10,02%	77,28%	33187	128,81	Cluster 1
Necropolis	5,00	7,07%	84,91%	32586	63,03	Cluster 1
Affliction	8,75	5,76%	83,37%	49710	29,73	Cluster 2
Mercenaries	10,00	5,62%	85,74%	36416	50,02	Cluster 3
Settlers	6,04	4,41%	82,85%	29170	65,40	Cluster 3
Ancestor	7,70	3,27%	70,75%	44957	20,62	Cluster 4

Leagues are grouped into four market types by clustering in notebook 08. Cluster 1 (Keepers, Necropolis) has the lowest median prices (3.80 and 5.00) and the highest Price Volatility (10.0% and 7.1%). Cluster 3 (Mercenaries, Settlers) combines lower Price Volatility (4–6%) with a high share of value held by the top 1% of items (83–86%). Affliction (Cluster 2) has the most players, and its economy is mainly driven by their high trading activity. Ancestor (Cluster 4) clearly stands apart from the other leagues: it has the lowest Top 1% Share and the lowest market value per player, so its market value was spread across many items rather than concentrated in a few expensive ones. The clustering also used indicators not shown here, such as the number of daily listings and total market value, so the groups are not fully visible in this table.

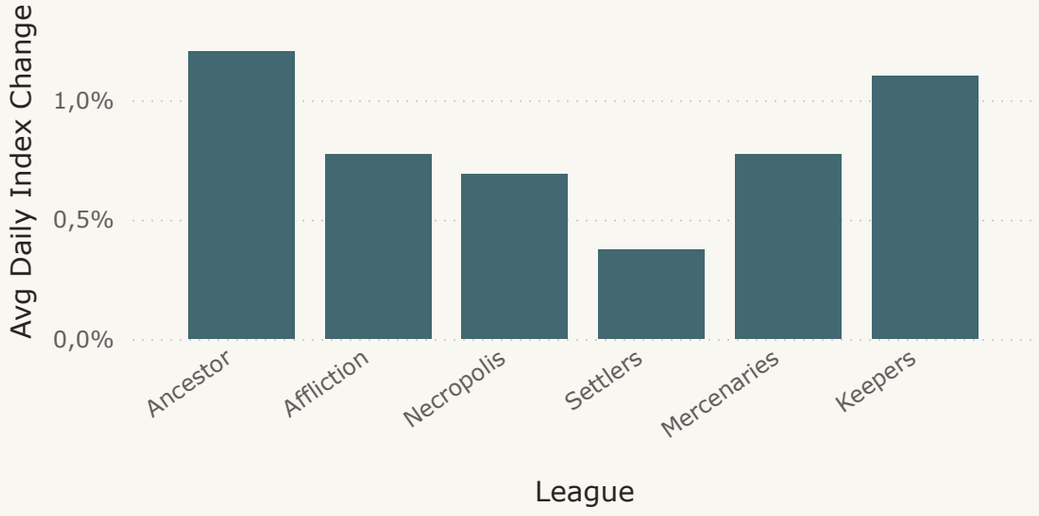

Currency Index by League

League Day: 1 – 140

League: All

Avg Daily Index Change by League

League	Launch hype	Early league	Mid league	Late league
Keepers	7,76%	4,91%	4,00%	14,30%
Mercenaries	21,95%	3,33%	1,95%	2,67%
Settlers	24,52%	2,77%	2,69%	2,08%
Necropolis	25,91%	4,33%	3,27%	2,29%
Affliction	21,73%	2,19%	1,70%	1,73%
Ancestor	8,16%	2,38%	1,60%	1,78%

Each row is one league; a stronger colour means a higher value than in the other leagues. The phase heatmap shows Price Volatility in each phase of a league, from Launch hype to Late league. The line chart shows the Currency Index day by day for each league (1.0 = start of the league); use the league and league day slicers to compare chosen leagues over the same period – they affect only the line chart. Average Daily Index Change shows whether currency lost or gained purchasing power on a typical day. League Cluster is the market type assigned to each league by the clustering in notebook 08.
